Flexilite Technical Manual

# Premier Flexilite Components:

The Premier Flexilite is made up of the following components:

Lid

Wrap

Base

Premier Flexilite Types:

The Premier Flexi-lite is available in three different shapes:
Curved, Oval and Rectangular, which are illustrated with their dimensions:

	Plan view	Front view

Curved

985mm

590mm

1000mm

Oval

996mm

547mm

1000mm

Rectangular

998mm

547mm
1000mm

Premier Flexilite Construction:

Flexi-lite is made up of a wooded base and lid with a flexible, corrugated fibre board that can be rolled up and applied to the shape of the base. The following construction diagrams have been done using the Rectangular Flexilite, however the principle is the same for all three types.
Stage 1 - Set up

Start off with the base flat on the floor.

Velcro Strips

Take the rolled-up 'wrap' and begin attaching the right corner of the wrap onto the inner angle of the base.
The wrap has velcro strips along the top and bottom edges to allow it to adhere solidly to the other strips along the base. Gently start to unroll the roll the wrap, following the shape of the base.
Premier Flexilite Construction:

Stage 2 - Adding the lid

When you have fully unrolled the wrap, this is how your Flexilite should look

The next step is to attach the lid. Place the lid on top of the unit with the cable tidy facing the front. Push the lid down until it is completely attached to the velcro strips inside the wrap.

The Flexilite is now ready.

Premier Flexilite Construction:

Stage 3 - Applying the graphic panel

Attach the graphic panel to the front of the Flexilite by using the steel tape located on the rear of the graphic and stick it onto the magnetic tape located on the front of the wrap.

The finished Flexilite with the graphic attached.
Premier Flexilite Panel Dimensions:

The graphic panel is the same size for all three types of the Flexilite. When printing your own graphics, it is advisable that you add steel tape to the rear of the panel in order to magnetise the graphic to the magnetic tape on the wrap.

Premier Flexilite Enhancements:

Shelving

There are two types of shelves that can be attached to the Flexilite unit, the inner-shelf and the keyboard shelf. Both of the below options cannot be retro-fitted. This means that you must specify at the time of the ordering what shelf you would like to add onto your unit.

Inner shelf

Attach the inner shelf to your Flexilite by using the vertical velcro strips that are shown in black above and run down the inside of the wrap. This shelf is commonly used to hold literature which can support approximately 20kg.

Keyboard shelf

On the underside of the lid you can attach a keyboard shelf which can be used as an extension of the lid or as a standard size keyboard shelf.
Premier Flexilite Enhancements:
## Locking Doors

For added security, especially when leaving products or brochures on your stand, a lockable door can be added. This option cannot be retro-fiited. Which means that you must specify at the time of ordering that you would like to add a locking door to your Flexi-lite.

The male hinge comes attached to the wrap and the female is on the inside of the door.

The female hinge ports on the frame of the door are lowered on to the male ports on the Flexilite wrap.

The completed unit with lockable door.

Premier Flexilite Enhancements:

Cable Tidy

The cable tidy comes as standard fitted to all units. Please specify at the time of ordering if it is not required.
Premier Flexilite Enhancements:
Wheeled Case

Firstly roll the graphic up still attached to the wrap, following by the lid, base and locking door. If you have an inner-shelf and/or keyboard these will fit comfortable as well.

The two diagrams below show the order in which the case should be packed and the dimensions of the case.

1000mm

630mm

230mm

Premier Flexilite Finishes:

The Premier Flexilite is available in these standard finishes. Please be aware that you can match different finishes for the wrap and the lid.
